U.S. Stock Markets React to Job Report, Lowering Interest Rate Hike Fears

On October 2, 2026, U.S. stock markets saw a significant rise after a disappointing jobs report was released. The report showed that only 29,000 new jobs were created in September, far below the expected 93,000, and the unemployment rate increased to 4.2%. This weaker job growth reduced the likelihood that the Federal Reserve (the U.S. central bank that controls interest rates) would

raise interest rates in the near future. As a result, the Nasdaq index, which tracks many technology companies, gained 319 points, while the S&P 500 and Dow Jones also saw increases.

This news is important for everyday people because lower interest rates can lead to cheaper loans for homes and cars, making it easier for families to afford big purchases.

U.S. Stock Markets Face Volatility as Treasury Yields Fluctuate

On October 1, 2026, U.S. stock markets experienced fluctuations due to changes in Treasury yields, which are the returns investors earn from lending money to the government. The 10-year Treasury yield peaked at 5.344%, the highest since 2002, while the 30-year yield reached a 24-year high of 5.693%. This volatility in the stock market can affect everyday people by influencing borrowing costs for loans and mortgages.

Federal Reserve Keeps Interest Rates Steady Amid Mixed Economic Signals

On October 4, 2026, the Federal Reserve (the U.S. central bank that controls interest rates) decided to maintain the current interest rate range of 3.75% to 4.00%. This decision came after mixed economic data, including a surprising drop in inflation (the general rise in prices of goods and services over time) and signs of continued growth in manufacturing. The Fed's decision is significant for everyday people, as stable interest rates can help keep borrowing costs predictable for loans and mortgages.

U.S. Public Debt Could Reach 160% of GDP Without Changes

According to Scope Ratings, U.S. public debt could rise to 160% of the country's Gross Domestic Product (GDP) over the next decade if no significant fiscal adjustments are made. Gross Domestic Product (GDP) is the total value of all goods and services produced in a country. While the U.S. maintains a stable credit rating, this warning highlights the need for changes in fiscal policy to ensure long-term economic stability. For everyday people, rising public debt can lead to higher taxes and reduced government services in the future.

COMPANIES

Micron Technology Reports Strong Earnings Driven by AI Demand

Micron Technology, a leading semiconductor company, reported impressive fiscal Q4 results, with earnings per share reaching \$33.42 and revenue climbing to \$54.2 billion. The strong performance was largely due to increased demand for high-bandwidth memory used in artificial intelligence (AI) applications. This news is significant for everyday people as it reflects the growing importance of technology in the economy and may lead to job creation in the tech sector.

Nvidia Announces Massive Stock Buyback, Signaling Confidence

Nvidia, a leading technology company, announced a record \$235 billion stock buyback, which is when a company buys back its own shares from the market. This move reflects the company's confidence in its financial health and future growth prospects, particularly in artificial intelligence (AI) and gaming. For everyday people, stock buybacks can indicate a company's strong performance, potentially leading to higher stock prices and benefiting investors.

FEATURE

EXPLAINER OF THE DAY

Understanding Treasury Yields and Their Impact on Your Wallet

Treasury yields are the returns investors earn from lending money to the U.S. government through bonds. Recently, the 10-year Treasury yield reached 5.344%, the highest level since 2002, while the 30-year yield hit 5.693%, a 24-year high. These rising yields can indicate concerns about inflation (the general rise in prices of goods and services over time) and future interest rate hikes by the Federal Reserve (the U.S. central bank that controls interest rates). For everyday people, higher Treasury yields can lead to increased borrowing costs for mortgages and loans.
