## ECONOMY

# U.S. Economy Adds Jobs, But Not as Many as Expected

The U.S. economy added 29,000 jobs in September 2026, which is much lower than the expected 84,000 jobs. This shortfall indicates that the job market may not be as strong as hoped, especially since previous months' job gains were also revised downwards.

Job growth is crucial because it affects people's ability to earn a living. When fewer jobs are created, it can lead to higher unemployment rates, which can impact household incomes and spending. Sectors like health care and construction saw job increases, but losses in government and financial sectors weighed down the overall numbers.

## MARKETS

## U.S. Treasury Yields Hit Highest Levels in 24 Years

As of October 5, 2026, U.S. Treasury yields, which represent the return investors earn from lending money to the government, have reached their highest levels since 2002. The 10-year yield surpassed 5.3%, and the 30-year yield reached 5.693%. This increase is due to expectations that the Federal Reserve (the U.S. central bank that controls interest rates) will reduce its bond-buying activities.

Higher Treasury yields can lead to increased borrowing costs for consumers and businesses, which may affect loans for homes, cars, and other purchases. As borrowing becomes more expensive, it can slow down spending and economic growth.

## S&P 500 Index Approaches All-Time High Thanks to Tech Stocks

On October 5, 2026, the S&P 500 (an index that tracks the stock prices of 500 large U.S. companies) rose by 0.8%, closing just 0.2% below its all-time high. This increase was driven by significant gains in technology stocks, with the Nasdaq Composite (another stock index) also reaching a new record.

For everyday people, a rising stock market can indicate a healthy economy, which may lead to job creation and increased consumer confidence. However, it's important to remember that not everyone invests in the stock market, so the direct impact on daily lives may vary.

## ECONOMY

## U.S. Economy's Growth Revised Upward to 2.2%

The U.S. economy's growth for the second quarter of 2026 has been revised upward to 2.2%, indicating stronger performance than previously reported. This revision reflects

higher consumer spending and business investment during that period.

Economic growth is crucial because it affects job creation and overall prosperity. A growing economy generally leads to more jobs and higher wages, benefiting everyday people.

## Micron Technology Reports Strong Earnings Driven by AI Demand

Micron Technology reported strong financial results for the fourth quarter of 2026, with earnings per share reaching \$33.42 and revenue climbing to \$54.2 billion. This success is largely due to increased demand for high-bandwidth memory used in artificial intelligence applications.

For everyday people, strong company earnings can indicate a healthy economy, which may lead to job creation and better job security in the tech sector.

## Schneider Electric to Buy PTC for \$22.6 Billion

Schneider Electric announced its plan to acquire PTC, a U.S. industrial software company, for approximately \$22.6 billion. This acquisition is expected to close in the third quarter of 2027, pending approvals.

While this news primarily affects investors and the companies involved, large acquisitions can signal trends in the tech industry and may influence job opportunities in the future.

### EXPLAINER OF THE DAY

## How Rising Treasury Yields Affect Your Finances

Rising U.S. Treasury yields, which represent the return investors earn from lending money to the government, have significant implications for everyday people. Higher yields can lead to increased borrowing costs for loans, affecting mortgages, car loans, and credit cards.

Understanding this concept is crucial for making informed financial decisions, as it can impact household budgets and spending habits.
